

Profile

Recent BCA (Cloud & Cyber Security) graduate with hands-on experience in Microsoft Azure, Linux administration, AWS, and cloud support. Proficient in Azure Virtual Machines, Azure Blob Storage, Microsoft Entra ID, Azure Virtual Network (VNet), EC2, S3, IAM, and cloud monitoring through projects and internship experience. Familiar with cloud infrastructure, server administration, virtualization, networking concepts, and identity management. Currently learning DevOps and automation while strengthening practical cloud engineering skills.

Core Technical Skills

- **Cloud Platforms:** Microsoft Azure (AZ-900 Certified), Amazon Web Services (AWS)
- **Azure Services:** Azure Virtual Machines, Azure Blob Storage, Microsoft Entra ID (Azure Active Directory), Azure Virtual Network (VNet), Azure Monitor, Azure Resource Group, Azure Network Security Group (NSG)
- **AWS Services:** EC2, S3, VPC, IAM, MFA, CloudWatch, CloudTrail, Security Group Configuration, Auto Scaling, EBS, Lambda, Route 53, Load Balancing, AWS WAF & Shield, CloudFormation, RDS.
- **Operating System:** Windows Server, Red Hat Linux (RHEL)
- **Networking:** TCP/IP, DNS, HTTP/HTTPS, VPN, IP Addressing, Subnetting, VPC & VNet Concepts, Security Groups
- **Security Concepts:** Data Protection, Cloud Security, Monitoring & Logging
- **Tools & Others:** Git/GitHub, MySQL, Zabbix, Grafana.

Experience

1. Cloud Support Internat Digitalearn Solution Pvt Ltd

(April 2026 - July 2026)

- Worked on AWS and GCP cloud environments for basic deployment, hosting, and support-related tasks.
- Hosted static websites on AWS and deployed PHP-based websites on GCP during internship projects.
- Assisted in cloud infrastructure monitoring, troubleshooting, and basic server management activities.
- Worked with Red Hat Linux environments for command-line operations and support tasks.
- Collaborated on support activities and technical coordination for US-based client requirements.
- Assisted in cloud infrastructure monitoring, incident troubleshooting, and basic server administration to support cloud-hosted environments and improve service reliability.

Projects (Self Initiated)

1. Cloud-Based Intelligent Ticketing System

(May 2026)

Technologies Python, Streamlit, AWS EC2, RDS, SNS, MySQL

- Developing a cloud-hosted ticket management platform for incident tracking and support workflow automation.
- Implementing ticket creation, priority management, dashboard monitoring, and automated alert mechanisms.
- Integrating AWS cloud services for deployment, database management, and notification workflows.
- Designing a scalable architecture that simulates real-world IT support operations.
- Simulated IT support workflows and incident management using AWS services for cloud-based operations.

Project URL: <https://github.com/vanshika-clouddev/Cloud-based-intelligent-ticketing-system>

2. Multi-Region Cloud Failover Architecture (Case Study)

Technologies: AWS, Route 53, Load Balancer, Disaster Recovery Concepts

- Designed a highly available cloud architecture with multi-region failover capabilities.
- Planned disaster recovery workflows to improve business continuity and service availability.
- Analyzed recovery objectives, fault tolerance strategies, and cloud resilience best practices.
- Evaluated High Availability (HA) and Disaster Recovery (DR) strategies for resilient cloud deployments.

Education

BCA (Cloud & Cyber Security) – HIMT UNIVERSITY, Meerut (U.P) 12 th	(2023-2026)
Standard – SMPKD Senior Secondary School, Firozabad (CBSE Board)	(2021-2022)

Certification

- Microsoft Azure AZ900 (Certified) – Microsoft
- Amazon Web Services (Training) - E&ICT Academy
- Linux Administration (Training) - E&ICT Academy
- Advance Cloud (Azure) (Training) - E&ICT Academy
- Certified Ethical Hacking v13 (Training) - E&ICT Academy
- Computer Hacking Forensics Investigator (Training)- E&ICT Academy
